Hi John,

I see a WA99 message listed in the Frisnit log, but what station is this?

Regards - Dirk

6887. Navtex Log from Antwerp, BEL 20131215

Yahoo group: navtexdx (2013)
Date: 2013-12-15 19:57:49 UTC
From: Dirk Claessens
Topic: 6887 Message: 6887

```
Hi all,

A long series of nearly perfect decodes from Ismailia, and that's it...
T/A: nil :0(

Cheers - Dirk

Report from    : Dirk Claessens
QTH            : South of Antwerp, Belgium
Locators       : 51.07.23N 04.28.03E [JO21je]
Receiver       : Perseus SDR, Lowe HF225
Antenna1       : paOrdt Mini-Whip @ 5m
Antenna2       : lz1aq/paordt 1mtr wideband loop
Navtex-Decoder : YaND 6.3

Dirk....station $12W is in Astoria, OR, USA and is one of about five that I decode during the winter months. The distance is 3300 km. according to Google Maps Calculator. Astoria seems to be right on the Oregon - Washington state line.

6892. more Astoria OR NAVTEX stuff..

Yahoo group: navtexdx (2013)
Date: 2013-12-16 19:17:10 UTC
From: Marc Goldman
Topic: 6892 Message: 6892

OK for starters.. Astoria OR is just the name of the station.. NMW for both Navtex and DGPS the real transmitter locations are at Ft Stephens which appears to be some sort of park with boat docks nearby..

DGPS 287 KHz is at :
46 12 18.4 N 123 57 26.1 W

nearby is NAVTEX 518 “W” at
46 12 14.3 N 123 57 22.2 W
it appears to be using a “Marconi” long wire between two telephone poles with a feed in the middle... many NDBs use this type of antenna

the DGPS antenna is a vertical tower..
any long and lat that comes up in the town of Astoria is baloney !
Looking at Google Earth this appears to be an easy to visit place... tourist and boater destination. there is a lumber mill down the road a bit..

further east in the middle of nowhere is MHW Karpen 201 KHz NDB.

Hello Roberto,

I have YaND set for skipping all messages at distances below 1500 km.
With 2 instances of YaND running on two antennas, this saves me a lot of
work.

So, I missed your UNID, but looking at the format, my guess is Oostende.

73,
Roelof

You are very well equipped, Roelof!

The signal was good, so I think that might be Oostende, but I do not
understand the meaning of the message, even if it is incomplete.

From: Roelof Bakker
Topic: 5067 Message: 6899

Hello all,

At last some excellent propagation from all directions.
Not really, as Archangelsk has gone missing!

Daily log:

Hi Maurizio,

Yahoo is behaving erratically again, no idea why.
I had to moderate your posts;

I will delete any duplicates when they show up.

Cheers - Dirk

Hello Roelof,

there are other my 3 message just arrived.

I have sent two of them 3 hours ago by two different SMTP servers and I
have sent one of them by web 2 hours ago.

Sorry to all.

Maurizio

I've been finding my way around YaND this morning and I think I've got it configured correctly.
Forgive me if there are some errors and yes, I know the report is "stale", but here goes:

Report from : Bruce McCreath
QTH : Saltford, ON, Canada
Locators : 43 44.61N 81 41.28W (EN93dr)
Receiver : TS-440SAT into DSP-59+
Antenna 1 : Delta loop 30M a side, apex up
Antenna 2 : VE7SL type 3M octagonal loop
Antenna 3 : W1VD style AMRAD active loop
Decoder : YaND V 6.3

```

Hi all,

Finally, a mild outbreak of T/A again.
I also catched short & garbled fragments of Boston, Charleston and San Juan.

Regards - Dirk

I was plagued with terrible power line noise last night, hence not much to report:

Report from : Bruce McCreath, VE3EAR
QTH : Saltford, ON, Canada
Locators : 43.74N 81.69W (EN93dr)
Receiver : TS-440S into DSP-59+ filter
Antenna 1 : Delta loop 30M a side, apex up
Antenna 2 : VE7SL type 3M octagonal loop
Antenna 3 : W1VD style AMRAD active loop
Decoder : YaND V 6.3

6916. Soundcard

Yahoo group: navtexdx (2013)
Date: 2013-12-18 18:26:47 UTC
From: Roelof Bakker
Topic: 5067 Message: 6916

Hello Dirk,

I have received a question about the performance of YaND and the sound card in use.
So far, I have not seen any difference, whichever sound card was used here.
Though I must admit that I did not a side by side comparison.

I have a Realtek on board soundcard, an ASUS Xonar D1 (internal), an EMU 202 USB and a cheap 3C Media USB dongle.

Could you shed some light on this issue?

73,
Roelof

6917. Re: [navtexdx] Soundcard

From: Dirk Claessens
Topic: 5067 Message: 6917

Hello Roelof,

The only important characteristic of a sound card when used to process digital signals is the stability of its internal clock, which controls the sample rate of the ADC.

The windows OS by itself is totally unsuitable for accurate timing purposes, time interval measurements or anything time-related.

The sound card works standalone and is not influenced by CPU-load, memory usage, disk operations, etc.. of the PC. This is why decoders rely on the sound card clock to derive crucial timing information.

A soundcard (especially in notebooks) may be several % off the required sample rate, but as you know this can be compensated for through YaND's calibration procedure. This is basically a "do once and forget" action.

Unstable sound cards with a short-term wandering clock are disastrous.
I can't speak for other decoders, but YaND internally uses a software PLL to sample the output of the envelope filters in the middle of each bit, in order to get the point of "maximum energy". The reference signal for the PLL is the sample clock, and its edges are compared to the edges of the signal to derive the phase error (heavily filtered of course).

This process is self-compensating but only up to a point. If the phase error grows too large, roll-over effects will take over and the decoder will loose sync.

Regards - Dirk

From: Roelof Bakker
Topic: 5067 Message: 6918

Hello Dirk,

Thank you very much indeed for your explanation.
I have always wondered why the cheap USB dongle worked just as good as the far more expensive EMU 202!

For audio quality it makes a difference, though.
Albeit probably only for the well trained ear!

73,
Roelof

6921. Navtex Log 16-17/12/2013 from Tuscany Coast

Yahoo group: navtexdx (2013)
Date: 2013-12-19 08:38:37 UTC
From: Roberto Rizzardi
Topic: 6921 Message: 6921

Hi all,
sorry for delay due to no connection line.

Good signals in these days with Grindavik, ISL for first time and some
good stations in daytime.
Here the log 1300 km over.

73's

Roberto Rizzardi

Thanks all for the help.
It was strange to receive here Vardo in daytime! :-)

73, Roby

6929. Longitude - Latitude

Yahoo group: navtexdx (2013)
Date: 2013-12-19 15:20:45 UTC
From: <stevesden1@...>
Topic: 6929 Message: 6929

Hi all...

Bit of advice on how to set correct Longitude - Latitude on YaND..

My position according to Google Earth is...

51.3319.15N
1.4704.16W

If I enter this as 51.331915
1.470418

YaDD gives Niton as being 216 km from here South when it is in reality about 75 miles South..

Any advice on tweaking settings would be great)

Regards - Steve

6930. Re: [navtexdx] Longitude - Latitude

From: Roberto Rizzardi
Topic: 6929 Message: 6930

Hi Steve,
the West must be entered with the minus before

-1.470416

North is ok without any sign

73, Roby

6931. Re: [navtexdx] Longitude - Latitude

Yahoo group: navtexdx (2013)
Date: 2013-12-19 16:11:16 UTC
From: Dirk Claessens
Topic: 6929 Message: 6931

Hi Steve,

As Roberto said, West and South must be entered as negative numbers.
But there's more: YanD expects "true" decimal degrees.

51.3319.15N is NOT = 51.331915 decimal deg!

Example: 51.56'34.81"N = 51.943004 decimal degrees
In the Options menu of GE the display format can be changed.

The decimal format was used in YaND because of its unambiguity; there are just too many other "standard" formats to express lat/lon.

Cheers - Dirk

Thanks Dirk- Roberto,

Have sorted, all ok! thanks for the info, took a bit of time as internet sourcing was giving different results for decimal degree)
Accuracy now is + - 3km...not bad!

Cheers - Steve

6940. Re: T/A Navtex

Yahoo group: navtexdx (2013)
Date: 2013-12-20 17:56:42 UTC
From: John Bruce McCreath
Topic: 6936 Message: 6940

> Hi John,
>
> Nice results... next stop: European T/A?
>
> Regards - Dirk

Hey Dirk, You bet I'm hoping for some T/A Navtex decodes over the winter months. I've logged T/A on both 600M and 2200M "amateur bands" using the QRSS60 and WSPR modes, so it should be possible with Navtex, thanks to their higher power. Being inland from the east coast about 800+ km just makes it more challenging.

By the way, I'm one of those people who go by their second names.

73, Bruce, VE3EAR

6941. Navtex log 19-20/12/2013 from Tuscany Coast

Yahoo group: navtexdx (2013)

Hello all,

We had a power outage just after 03:00 UTC.
However, I don't think much was lost.
Propagation is still not very good!

Daily log:

Hello Roelof,

You havent't missed anything, conditions are miserable.

I don't know what to think of propagation and its relation to the sun's activity.
I have now an archive spanning 6 full years of Navtex DXing, and have attached a collage of reception statistics for long-haul DX over that period.

-For Miami and New Orleans one can see the effects of the solar cycle (a clear minimum in 2011-2012), and the first signs that we seem to be heading for the next minimum. (or was the T/A upsurge in september/october 2013 just coincidental?)

- San Juan doesn't show such a clear minimum, it seems to be unaffacted by the sun (because of a more southward propagation path?)

- Bahrein also seems to show vague signs of an approaching new minimum.
- Oman is unexplicable; it was more frequently logged here in sep/oct 2013 than in the 5 previous years! Or are we heading for a "super mimimum" as some scientists predict?

Regards - Dirk

Anyone out there interested in actually talking on their radio LOL!!!!

10M is wide open to parts of EU etc today. I am parked on 28.510 usb

Cheers..

Hello Dirk,

> -For Miami and New Orleans one can see the effects of the solar cycle (a
> clear minimum in 2011-2012), and the first signs that we seem to be
> heading for the next minimum. (or was the T/A upsurge in
> september/october 2013 just coincidental?)

The figure of merit is solar flux, I believe.

http://www.spaceweather.ca/solarflux/sx-5-mavg-eng.php

This site gives the average monthly solar flux figures since 1947.
When you scroll to the bottom of the page, you will see that during the last long minimum solar flux figures were below 100 and when LF conditions were really good they were below 70 for a long time.

The figure for September 2013 is 103 and this agrees very well with my findings that a solar flux figure of 100 or less gives good DX propagation.

Today solar flux is 149, not a good omen, I'm afraid.
It is not only NAVTEX reception that is nothing to write about; NDB reception is in the same league.
In September I logged 25 stations on a single night, which is not possible at all at the moment.
The weird thing is that the world's northern most NDB, LT-305, Alert, CAN NU at 82 degrees north is the most common one these days. In fact I am listening to it at the moment and earlier this week it could be found already at 14:00 UTC.

A similar experience on NAVTEX is reception of Bodo and Vardo. As a result, Alger radio has become very rare!

73,
Roelof

I just have to look at my South America and EU logs...2006-2008 were
awesome years...2007 was the year of South America for me...new ones
every night LOL!!!

Hello Roberto,

Yes, if you have an interest in 10 meter, that is the place to be.
One needs a SDR with waterfall display to really see what is going on
there.

Last week during the ARRL 10 meter contest, the CW part of the band
(28.000-28.200) wa spacked with signals. I have not seen this before on 10.

I guess in a few years time things will be different!

73,
Roelof

Hi Roelof & Roberto

Thanks for the info.
Indeed, the flux for September was significantly lower than previous months.
This could explain the T/A upsurge then.

Regards - Dirk

6954. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2013)
Date: 2013-12-22 11:03:11 UTC
From: Roelof Bakker
Topic: 5067 Message: 6954

Hello all,

Yesterday was the winter solstice, hence I did a daytime / night run
starting at local noon.
Propagation is rather poor at present!

Daily log:

6955. Report 21-22 Dec.

Yahoo group: navtexdx (2013)
Date: 2013-12-22 13:32:04 UTC
From: John Bruce McCreath
Topic: 6955 Message: 6955

Despite an overnight ice storm, which has left all of my antennas sagging, I still decoded some DX!

Report from : Bruce McCreath, VE3EAR
QTH : Saltford, ON, Canada
Locators : 43.74N 81.69W (EN93dr)
Receiver : TS-440S into DSP-59+ filter
Antenna 1 : Delta loop 30M a side apex up
Antenna 2 : VE7SL type 3M octagonal loop
Antenna 3 : W1VD ver. AMRAD active whip
Decoder : YaND V 6.3

6959. Navtex log 22-23/12/2013 from Tuscany Coast

Yahoo group: navtexdx (2013)
Date: 2013-12-23 09:05:50 UTC
From: Roberto Rizzardi
Topic: 6959 Message: 6959

Hi all,
this night I used Yand with "Unshift on space" ticked to test if this help to a better result decoding the low signals.
I had not empty UNID messages in my log, but often the numbers in the messages of the stations with good signal were decoded as letters and this need to use the Shift Reverser in the software.
I think is not a good set for the standalone mode.

73, Roby

Report from : Roberto Rizzardi
QTH : Porto Santo Stefano (GR), Italy
Locator : JN52nk
Receiver : IC-R71E
Antenna : 75 cm side square MW tunable loop
Extra : Grahn GS2 controller
Decoder : YaND 6.3
Stations filter: over 1300 km

6960. Re: [navtexdx] Navtex log 22-23/12/2013 from Tuscany Coast

Yahoo group: navtexdx (2013)
Date: 2013-12-23 10:21:41 UTC
From: Dirk Claessens
Topic: 6959 Message: 6960

Hi Roberto,

As stated in the manual regarding UoS: "don't expect miracles"
UoS can be used on the transmitting side as well, but not all stations do this.
With UoS enabled at the transmitting side, 48 10,00 N is sent as:

<FIGRS>48<SPACE><FIGRS>10,00<SPACE><LTRS>N, which Yand will decode correctly, regardless of its UoS setting.

Without UoS, 48 10,00 N is transmitted as:
<FIGRS>48<SPACE>10,00<SPACE><LTRS>N, which Yand will decode as 48 QPNPP N if UoS is enabled.

This problem is as old as RTTY, and there's no cure for it...

Regards - Dirk

6962. Re: [navtexdx] Navtex log 22-23/12/2013 from Tuscany Coast

Yahoo group: navtexdx (2013)
Date: 2013-12-23 11:40:22 UTC
From: Roberto Rizzardi
Topic: 6959 Message: 6962

Hi Dirk,

I read this in the manual and for this I wanted to test the reception
with this setting.

Without UoS I saw that the messages from same station (as Niton or
Split) are displayed without a blank UNID between the messages, but
other stations didn't.
This due to the use by the transmitting side, as you wrote.

I think it's better to left UoS unticked and try to use the Shift
Reverser in the software to decode the unid text received.

73, Roby

6965. UPS interference

Yahoo group: navtexdx (2013)
Date: 2013-12-23 18:30:07 UTC
From: Bill Riches
Topic: 6965 Message: 6965

Have been tracking down intermittent RF interference while using my Perseus for beacons and navtex. There would be a raspy signal starting about 130 KHZ and harmonics 260 KHZ and the baddie at 520 KHZ. Its signal strength is about s9 on the receiver. It sounds like a buzz saw and is on every 10 seconds or so for about 3 seconds. I thought that it was from power company stuff - meter reading, switching signals, or even our neighbor's dog fence! Not so. It is in my home. Fired up a portable am radio, set it on 520 KHZ and the racket was loud and clear in the shack. Turned off the power mains and it went away. Found that it was coming from my APC XS1500 computer UPS! Seems the swichmode battery charger in the unit is working fine! Every 10 seconds.

I called APC and tried to talk with a tech and that did not happen. The "tech support" person suggested a power strip! I asked if they had any units in their line that did not have this interference and she said she would check. After 5 min she said no we dont.

Have any of you found a UPS that may not have this problem?

73,

Bill, WA2DVU

Cape May, NJ

6966. A promising night

Yahoo group: navtexdx (2013)
Date: 2013-12-24 03:26:08 UTC
From: John Bruce McCreath
Topic: 6966 Message: 6966

I took a quick peek at YaND before heading off to bed and I was surprised to see stations $04M Simiutaq and $04W Nuuk, Greenland. The west coast was doing well too, with $12W Astoria, OR, USA logged. I wonder what morning will bring?

73, Bruce, VE3EAR

6967. Merry Christmas

6969. NAVTEX Log Corby 23/24 Dec

Yahoo group: navtexdx (2013)
Date: 2013-12-24 10:09:35 UTC
From: <denno9@...>
Topic: 6969 Message: 6969

Hello all, a momentary 'wow!' when I spotted the log below last night, but of course it is not real. YaND seems to have picked up 'EQM' in the text, but ignored two keywords that would point to Saudanes in the correct time slot?
Real-world logs also below

73

6971. Re: [navtexdx] NAVTEX Log Corby 23/24 Dec

Yahoo group: navtexdx (2013)
Date: 2013-12-24 10:42:08 UTC
From: Dirk Claessens
Topic: 6969 Message: 6971

Hi Dryden,

I got the same "wow" moment here :0)

YaND first does a scan for unique keywords, ignoring the ID-letter. A station callsign is unique, but quite short. I have no idea what EQM means in this context. Figures-shifted it is "31.1". Probably it was something received in error.

Regards - Dirk

>
>
>
>
>Hello all, a momentary 'wow!' when I spotted the log below last night, but of course it is not real. YaND seems to have picked up 'EQM' in the text, but ignored two keywords that would point to Saudanes in the correct time slot?

6979. YaND Newbie Question

Yahoo group: navtexdx (2013)
Date: 2013-12-25 17:42:26 UTC
From: Hank Lane
Topic: 6979 Message: 6979

Have YaND 6.3 installed on laptop. Feeding microphone input with mono signal from TenTec RX-340 Headphone output (10 mW into 600 Ohms). Logs produced are mostly garbage, but every now and then I get readable text. What am I doing wrong? I have Latitude and Longitude and put auto decode on. All else are default settings.

The RX-340 has other outputs for feeding digital programs: Speaker out(2.5 W into 4 Ohms); IF out; 1st Mixer Out; 2nd Mixer out; Signal Monitor out. Anyone else with an RX-340 tried these alternate outputs?

hank (Massachusetts, US)

> Feeding microphone input with mono signal from TenTec RX-340 Headphone output (10 mW into 600 Ohms).

You are quite likely over-driving the sound card in the laptop. I had a similar issue here recently and I solved it
by putting a 20dB attenuator in the audio lead between the radio and the laptop. You'll need a pair of 470 ohm
resistors and one 120 ohm resistor. They form a classic "T" pad which will match the Z nicely. Good luck!

73, Bruce, VE3EAR

6981. Re: [navtexdx] YaND Newbie Question

Hank,

One of the most important things is to calibrate your sound card.
When it is way of it is all garbage what you get!

Click on the "Sigal/Calibration" tab an dread the instructions.

Please let us know how you fare.

73,
Roelof, pa0rdt

Hi Hank,

The easiest way to check what Roelof and Bruce suggested is as follows:

In Yand's directory, a file calibrationsignal.wav should be present.
With headphone output connected to microphone or Line In, play that file with mediaplayer (or whatever) and follow instructions as shown on the calibration tab. Try manual mode first. If you use autocal mode, this was made slow deliberately: give it at least 30 seconds to stabilize and don't forget to press the save button.

To check for clipping of the audio input, use the scope on the signal/calibration tab.
On the Raw channel, you should see a slightly warbling sinusoid. If you see a square wave you need to adjust the input signal amplitude in Windows' mixer settings. If this works OK, check again for the RX input. Note that the scope's Y-axis is auto-scaled, so you'll always see "something".

Cheers - Dirk

Hank

The Signal Monitor Output would be a fixed audio output level which is independent of the volume control.
Try that output and set the input level in the program. Don't forget to calibrate the soundcard.

Bob VK7ZL

From: Roelof Bakker
Topic: 5067 Message: 6986

Hello all,

Due to the aftermath of a solar disturbance as evident on low Kyoto Dst figures, I could make an interesting observation.

Where normally Bodo and Vardo are well received on my loop, last night they did not appear at all.
However, on the mini-whip I found excellent decodes of both stations. This is what I found on the mini-whip in the 00:10 UTC time slot:

So a relatively small change in propagation can give quite different
results.

The upcoming night, I will change the direction of the loop to place Bodo
in the null.
It might be interesting to see what happens!

From: Hank Lane
Topic: 6979 Message: 6989

Thanks Roelof. My calibration was way off, so that is fixed now. Definitely less garbage and am fine tuning other parameters. What receiver bandwidth are you using? I have RX340 set to 516.48 USB with 1500 kHz bandwidth.

Subject: Re: [navtexdx] YaND Newbie Question

Hank,

One of the most important things is to calibrate your sound card.
When it is way of it is all garbage what you get!

Click on the "Sigal/Calibration" tab an dread the instructions.

Please let us know how you fare.

73,
Roelof, pa0rdt

6990. RE: [navtexdx] YaND Newbie Question

From: Hank Lane
Topic: 6979 Message: 6990

Thanks Dirk. Very helpful explanation. I practice with the wav file and think I have it set right now. My receiver signal audio input level seems to be 60-70% now, but I am still seeing a lot of garbage. SN levels are high usually 100%.

Subject: Re: [navtexdx] YaND Newbie Question

Hi Hank,

The easiest way to check what Roelof and Bruce suggested is as follows:

In Yand's directory, a file calibrationsignal.wav should be present.
With headphone output connected to microphone or Line In, play that file with mediaplayer (or whatever) and follow instructions as shown on the calibration tab. Try manual mode first. If you use autocal mode, this was made slow deliberately: give it at least 30 seconds to stabilize and don't forget to press the save button.

To check for clipping of the audio input, use the scope on the signal/calibration tab.
On the Raw channel, you should see a slightly warbling sinusoid. If you see a square wave you need to adjust the input signal amplitude in Windows' mixer settings. If this works OK, check again for the RX input. Note that the scope's Y-axis is auto-scaled, so you'll always see "something".

Cheers - Dirk

Subject: [navtexdx] YaND Newbie Question

Have YaND 6.3 installed on laptop. Feeding microphone input with mono signal from TenTec RX-340 Headphone output (10 mW into 600 Ohms). Logs produced are mostly garbage, but every now and then I get readable text. What am I doing wrong? I have Latitude and Longitude and put auto decode on. All else are default settings.

The RX-340 has other outputs for feeding digital programs: Speaker out(2.5 W into 4 Ohms); IF out; 1st Mixer Out; 2nd Mixer out; Signal Monitor out. Anyone else with an RX-340 tried these alternate outputs?

hank (Massachusetts, US)

Thanks Bruce. I was over-driving, but now I have backed off quite a bit using the RX-340 built-in headphone output volume control.

You are quite likely over-driving the sound card in the laptop. I had a similar issue here recently and I solved it

by putting a 20dB attenuator in the audio lead between the radio and the laptop. You'll need a pair of 470 ohm

resistors and one 120 ohm resistor. They form a classic "T" pad which will ma tch the Z nicely. Good luck!

Thanks Bob. The RX-340 Sig Mon output is 50 Ohm BNC connector. I'm embarrassed to say I don't have an immediate way to adapt a cable from BNC to the mini-phone microphone jack input on my laptop. However, as soon as I can acquire the appropriate interconnect cable I will try your suggestion.

The spec on the Sig Mon is: "A 455-kHz inverted signal with 16-kHz bandwidth and 80dB AGC range."

Subject: Re: [navtexdx] YaND Newbie Question

Hank

The Signal Monitor Output would be a fixed audio output level which is independent of the volume control.
Try that output and set the input level in the program. Don't forget to calibrate the soundcard.

Hank,

The RX-340 is a beautiful receiver!

I gather selectivity is obtained by DSP and not by X-tal filters.
If that is the case, a bandwidth of 500 Hz is excellent.
As YaND incorporates its own filters, this is not very critical.

I used to use a AR7030plus for NAVTEX reception and though it has high quality extra 1 kHz and 250 Hz crystal filters, best results were obtained by using the standard SSB filter.
Narrow crystal filters can have quite a bit of phase shift over the pass band, unless they are designed not to have it. This phase shift does not matter much for CW reception, but is disastrous for data modes.

For both my PERSEUS SDR and Afedri, I use a bandwidth of 400 - 500 Hz.

Roelof

This is NOT an audio out signal, but a 455 kHz IF signal that can be used
for external (DSP) processing. So the BNC connector makes sense!

Hi Hank,

I'm glad that our suggestions have been useful to you....looks like you're well on the way to
becoming a full-blown Navtex DXer! The monitor out jack of your receiver would be ideal for driving the sound card, as the level is constant. The line out of my Timewave DSP-59+ filter is the same. As to bandwidth, I have my TS-440S set to USB and tuned to 517 kHz., and then set the Timewave for 1000Hz. centre frequency and bandwidth set for 500 Hz. YAnD is of course set to 1000 Hz. on the spectrum/waterfall. I'm getting many more solid decodes than I was getting with the Frisnit Decoder, so the package works for me!

Hank,

Yes, you should not use it.

I have just been looking at the technical manual and found this:

>>>
TEN-TEC RX340 AUX/AUDIO OUTPUT PINS

Wiring for 15 pin male D type plug;

Pin 1 - Ground
Pin 2 - Mono audio output (AC coupled audio. Decoupled through a pair of
back to back
33 µf capacitors).
Pin 3 - Audio line output B
Pin 4 - Audio line output BCT
Pin 5 - Audio line output B+
Pin 6 - Audio line output A
Pin 7 - Audio line output ACT
Pin 8 - Audio line output A+
Pin 9 - Ground
Pin 10 - Mono audio output (DC coupled audio. Resistive connection
straight from audio
amplifier).
Pin 11 - Mute
Pin 12 - User function
Pin 13 - User function
Pin 14 - User function
Pin 15 - User function

For most normal audio output applications use the mono AC coupled audio
output on pin
2 with pin 1 as ground. This will give up to 10 mW output into a 600 ohm
load.
<<<

So between pin 1 and 2 is what you need.
This is Audio Line Out, so I gather the level is constant.

Roelof

Hello Bruce,

Had it since about 2002, I think. I have yet to find fault with it except for the fact that TenTec have abandoned it in terms of upgrades, firmware, applications, etc., but TenTec have a history of that sort of thing. (They have also abandoned my Jupiter transceiver; last time I looked the Jupiter wasn't even on their website even as a legacy product.)

Really like the RX-340, but I can use up a lot of time just playing with it once I start tuning around to see what I can find!

7001. RE: [navtexdx] YaND Newbie Question

Yahoo group: navtexdx (2013)
Date: 2013-12-26 18:27:28 UTC
From: Hank Lane
Topic: 6979 Message: 7001

Thanks, Roelof.

I have been using the headphone output jack to feed the laptop microphone in jack. The spec for the headphone output is…"10 mW into 600 ohms" and it has a front panel volume control. So, I guess I am Ok using that for the output.

-hank

Subject: Re: [navtexdx] YaND Newbie Question

Hank,

Yes, you should not use it.

I have just been looking at the technical manual and found this:

>>>
TEN-TEC RX340 AUX/AUDIO OUTPUT PINS

Wiring for 15 pin male D type plug;

Pin 1 - Ground
Pin 2 - Mono audio output (AC coupled audio. Decoupled through a pair of back to back
33 µf capacitors).
Pin 3 - Audio line output B
Pin 4 - Audio line output BCT
Pin 5 - Audio line output B+
Pin 6 - Audio line output A
Pin 7 - Audio line output ACT
Pin 8 - Audio line output A+
Pin 9 - Ground
Pin 10 - Mono audio output (DC coupled audio. Resistive connection straight from audio
amplifier).
Pin 11 - Mute
Pin 12 - User function
Pin 13 - User function
Pin 14 - User function
Pin 15 - User function

For most normal audio output applications use the mono AC coupled audio output on pin

2 with pin 1 as ground. This will give up to 10 mW output into a 600 ohm load.
<<<

So between pin 1 and 2 is what you need.
This is Audio Line Out, so I gather the level is constant.

Roelof

7005. NAVTEX-Portsmouth

Yahoo group: navtexdx (2013)
Date: 2013-12-27 13:05:41 UTC
From: Hank Lane
Topic: 7005 Message: 7005

Thank you to everyone who sent comments and suggestions. I seem to have NAVTEX running Ok at the moment (SEE BELOW- NMN broadcast). 768 Km is hardly a distance record, but it's a place to start.

Now I plan to start using my SDR-IQ as my NAVTEX receiver instead of the RX-340. The SDR-IQ is using SDRConsole, v2 bld1475, and is on the same laptop that is running the NAVTEX YaND v6.3.

Thanks again for all the help, everyone. This is a great group.

hank (Northeast Massachusetts, US)

****

PORTSMOUTH, NMN; 2013-12-27; 021132 UTC; 768 Km

7006. Dismal loggings

Yahoo group: navtexdx (2013)
Date: 2013-12-27 13:52:09 UTC
From: John Bruce McCreath
Topic: 7006 Message: 7006

My power line noise has returned with a vengeance (20 over 9) and hence dismal results in hunting for Navtex stations overnight. The only DX was station $04R in Puerto Rico!

Hi Hank,
if you want to improve performance in receiving Navtex, more than a good receiver you must have a good antenna and you'll see that the results will come.
Which are you using?

73, Roby

7009. RE: [navtexdx] NAVTEX-Portsmouth

Yahoo group: navtexdx (2013)
Date: 2013-12-27 18:31:51 UTC
From: Hank Lane
Topic: 7005 Message: 7009

Hi Roby,

Yes, I definitely need to improve my antenna for better NAVTEX reception. Right now I am using an antenna designed for Amateur Radio transceivers. It's a Comet broadband vertical antenna and it is the only option I have at present. Everything else for VHF/UHF reception. When the weather changes I'll get a longwire up over some tree tops and try that.

-hank

Hi Hank,
if you want to improve performance in receiving Navtex, more than a good receiver you must have a good antenna and you'll see that the results will come.
Which are you using?

73, Roby

Il 27/12/2013 14.05, Hank Lane ha scritto:

Thank you to everyone who sent comments and suggestions. I seem to have NAVTEX running Ok at the moment (SEE BELOW- NMN broadcast). 768 Km is hardly a distance record, but it's a place to start.

Now I plan to start using my SDR-IQ as my NAVTEX receiver instead of the RX-340. The SDR-IQ is using SDRConsole, v2 bld1475, and is on the same laptop that is running the NAVTEX YaND v6.3.

Thanks again for all the help, everyone. This is a great group.

Hi Hank,

I do not think that broadband antenna is ideal for Navtex and while you wait the good season, you might try to build yourself a loop that will surely give you better results, although used internally.
It is cheap and easy to build by yourself: some of meters of electric wire, a piece of coaxial cable and a variable capacitor.
If you want a starting point, here you can see what I use with the characteristics of construction:
http://diarioradio.blogspot.it/2012/11/aggiornamento-antenne-loop-onde-medie-e.html
(the site is in Italian language, but Google Translator will help you! ;-)).
This is not like the Wellbrook antennas ...but it work.

7011. Navtex Log from Antwerp, BEL 20131227

Yahoo group: navtexdx (2013)
Date: 2013-12-27 21:07:27 UTC
From: Dirk Claessens
Topic: 7011 Message: 7011

Hi all,

Strange conditions. Good signals from the Middle East, not a trace of T/A, absolutely nothing from the North (not even from daily regular Orlandet @ 1400km), but a full transmission from Arkhangelsk @2500 km, almost perfectly on the null of the loop!

Regards - Dirk

From: <dirk.claessens@...>
Topic: 7006 Message: 7012

Hi Bruce,

Caused by the weather perhaps? Snow/sleet/rain causing arcing, cracked insulators filling up with ice ?

Regards - Dirk

7013. Re: [navtexdx] RE: Dismal loggings

> Caused by the weather perhaps? Snow/sleet/rain causing arcing, cracked insulators filling up with ice ?

Hi Dirk,

We've had ALL of that in the last six days. Our power never went off, but there are tens of thousands to the
east of us that are still in the dark. I had about a 5 mm coating of ice on all of my antennas, but they all
stayed up!

73, Bruce, VE3EAR

7016. Navtex log 28/12/2013 from Tuscany Coast

Yahoo group: navtexdx (2013)
Date: 2013-12-28 14:00:38 UTC
From: Roberto Rizzardi
Topic: 7016 Message: 7016

Strange propagation this night: nothing from Scandinavia and for first
time in this season Alger.

Report from : Roberto Rizzardi
QTH : Porto Santo Stefano (GR), Italy
Locator : JN52nk
Receiver : IC-R71E
Antenna : 75 cm side square MW tunable loop
Extra : Grahn GS2 controller
Decoder : YaND 6.3
Stations filter: over 1300 km

7017. Report from VE3EAR

Yahoo group: navtexdx (2013)
Date: 2013-12-28 14:04:29 UTC
From: John Bruce McCreath
Topic: 6963 Message: 7017

Nothing spectacular, but at least better than the previous night!

Report from : Bruce McCreath, VE3EAR
QTH : Saltford, ON, Canada
Locators : 43.74N 81.69W (EN93dr)
Receiver : TS-440S into DSP-59+ filter
Antenna 1 : Delta loop 30M a side apex up
Antenna 2 : VE7SL type 3M octagonal loop
Antenna 3 : W1VD ver. AMRAD active whip
Decoder : YaND V 6.3

7018. Re: [navtexdx] Navtex Log from Antwerp, BEL 20131227

Yahoo group: navtexdx (2013)
Date: 2013-12-28 18:27:54 UTC
From: Roelof Bakker
Topic: 7011 Message: 7018

Hello Dirk,

Last night was not much better.
One good decode from VON and that is it.
Not a trace from anything else.

Canadian NDB's are rather poor at the moment, so bad T/A NAVTEX fits in
the picture.
(Or the other way round!)

The mini-whip feeds now my AR703plus for NAVTEX as the PERSEUS is engaged
otherwise.

7021. Report - First T/A!

Yahoo group: navtexdx (2013)
Date: 2013-12-29 13:50:17 UTC
From: John Bruce McCreath
Topic: 7021 Message: 7021

What a surprise to see station $01E in Niton, England logged overnight.
It is my first ever trans-atlantic navtex logging! I've had T/A on 2200M
and 600M amateur bands, so I knew it was possible.

Report from : Bruce McCreath, VE3EAR

From: Dirk Claessens
Topic: 7021 Message: 7022

Hi Bruce,

Bummer...what you logged was 04E Charleston...

YaND was fooled by the mention of ENGLAND in the message.
England is a keyword for 1E Niton. I guess you best delete it from 1E Niton's list.

Database > click on 1E GNI Niton> double-click on ENGLAND, confirm > save.

I'm also suspecting this is a misrouted message. CCGDSEVEN = Commander Coast Guard District 7, which is Miami. Also, mention is made of Florida/Cape Canaveral.

Back in 2011, I logged this one from Honolulu: :0)

2011-11-26 04:36:13> ZCZC AA17
2011-11-26 04:36:18> SECTOR HONOLULU BNM 344-11
2011-11-26 04:36:28> HI ISLANDS - ISLAND OF OAHU- HAZARDOUS OPERATIONS:
2011-11-26 04:36:40> 1. A [MILITARY] UNIT WILL BE CONAUCTING HAZARDOUS OPERATIONS
2011-11-26 04:36:42> OS 30NOV11
2011-11-26 04:36:55> FRZX 1700A TO 2100W, INIAR AREA BONDED BF PO~ITIONSN22-0:N U~
2011-11-26 04:36:56> EQ~IAPQW~N

Misrouting happens quite regularly, which is why we have a rule over here in Europe when interpreting USCG messages: "If you didn't catch the header, you can't be sure where it came from"

Regards - Dirk

7023. Re: [navtexdx] Report - First T/A!

Yahoo group: navtexdx (2013)
Date: 2013-12-29 15:40:38 UTC
From: John Bruce McCreath
Topic: 7021 Message: 7023

Hi Dirk,

Bummer is right....oh well, it was a good one while it lasted. In the future I'll make a point to read the
entire RAW messages before I get excited about a logging! I still have station $15K in Puerto Montt,
Chile as my best DX to date, with a distance of 5900 miles or 9500 kilometers!

73, Bruce, VE3EAR

7024. Re: [navtexdx] Report - First T/A!

Done....thanks, 73, Bruce

7025. Antenna comparison

Yahoo group: navtexdx (2013)
Date: 2013-12-29 16:46:59 UTC
From: Bill Riches
Topic: 7025 Message: 7025

Here is a comparison of three antennas over a three day period. Receiver is a Perseus. Quite impressed with Mini-whip, it being only about a half foot long. It is mounted 20 feet off ground in a pvc pipe. ALA 100 is two loops spaced at right angles in the center pointing E/W and NS. I have a dpdt relay to switch antenas. LF-1010 is 15 feet off ground on the garage roof with a rotator. Seems the best ant for weak sigs is the ALA100hg.

73,

Bill, WA2DVU

Topic: 7025 Message: 7026

Hello Bill,

Interesting experiment, thanks for sharing! What struck me is the high noise levels of the whip, typically 10..15 dB higher than the LF1010. I have a whip and a loop as well here and the difference in noise levels is negligibly low. Typical levels around 500KHz are -120dBm on the Perseus (RBW=30Hz), and -125dBm on a good day.

-Have you grounded the coax braid of the whip? (preferably at the base of the pipe it's mounted on) This is of course very dependant on local QRM levels, but with me the noise level sank 6dB after doing this. (I used 3 x 1.5 meter copper pipes)

-How far is the whip mounted from the house? It is important to mount it outside of the "noise bubble" surrounding a typical house, nowadays stuffed with all kinds of QRM generating appliances.

- Inside the whip's PSU is a strap that can isolate the whip's ground from that of the receiver. Worth experimenting with.

- To check whether mains noise is possibly being injected into the PSU: feed the whip from a 9V battery.

Regards - Dirk

>Here is a comparison of three antennas over a three day period. Receiver is a Perseus. Quite impressed with Mini-whip, it being only about a half foot long. It is mounted 20 feet off ground in a pvc pipe. ALA 100 is two loops spaced at right angles in the center pointing E/W and NS. I have a dpdt relay to switch antenas. LF-1010 is 15 feet off ground on the garage roof with a rotator. Seems the best ant for weak sigs is the ALA100hg.

7027. RE: [navtexdx] Antenna comparison

Yahoo group: navtexdx (2013)
Date: 2013-12-29 22:32:56 UTC
From: bill.riches
Topic: 7025 Message: 7027

Hi Dirk,

I have run whip, perseus, and laptop from batteries with house mains off and checked out whips power supply unit strap. No difference in noise. Mini whip is mounted at the top of a 10 foot pvc pipe that is fastened to the cast iron sewer vent pipe on the roof that is 10 feet off the ground. The antenna coax goes straight down to the ground - shield is connected to ground rods - real damp soil - and then into the house. No difference in noise whether shield is connected or not. I am the only house within 1000 feet and it is a pretty quiet neighborhood. Noise seems to be 10 db higher on the mini whip, however it is amazing the sig levels the small antenna gets.

73,

Bill

Here is a comparison of three antennas over a three day period. Receiver is a Perseus. Quite impressed with Mini-whip, it being only about a half foot long. It is mounted 20 feet off ground in a pvc pipe. ALA 100 is two loops spaced at right angles in the center pointing E/W and NS. I have a dpdt relay to switch antenas. LF-1010 is 15 feet off ground on the garage roof with a rotator. Seems the best ant for weak sigs is the ALA100hg.

From: Roelof Bakker
Topic: 5067 Message: 7030

Hello all,

T/A conditions are the worst I have experienced at this time of the year. Last night was poor with even NMR, Puorto Rico missing and also nothing from the East, which includes regular Varna!

So it was a surprise to find a much scrambled message on the loop from Miami, whilst the mini-whip produced Alger at the time! The southern null of the loop is directed towards Alger.

7033. Navtex and Soundcards --> Dirk & Roelof

Yahoo group: navtexdx (2013)
Date: 2013-12-30 15:44:47 UTC
From: <dl4ybp@...>
Topic: 7033 Message: 7033

After some time of absence I checked different contrubitions and found your interesting exchange of ideas about soundcards of Dec.18. Well, if I draw the right conclusion the only things that really matters is the stability of the soundcard.
Please compare my impressions with yours.

1) I still use two old 7-8 notebooks with Realtek High Definition Audio soundchips on the mainboard. The Navtex decoding quality is meagre. Just the usual European stations can be heard. With a few exceptions when propagation is good.

2) Also bout 6 years ago I tried to improve the decoding by adding an external souncard, a Creative Soundblaster. That really improved reception.

3) About 2 years ago changed to an Intel I7 notebook, also with a Realtek High Definition Audio soundchip on the mainboard. Decoding quality similar to the Creative Soundblaster. This means that the Realtek soundchip has been improved over the years.

4) Later this autumn I had the idea to see how the soundcard of my microham USB Intercae III works for Navtex. Up to then I used it for PSK31 etc. QSOs on the ham bands. I do not know what soundcard is used in this interface. I haven't found any imformation. But decoding was far better than ever before. Very often I could receive fragments of distant stations in between the transmissions of strong European stations. I have the impression as if I changed from very slow AGC to very fast or AGC off like in CW or SSB QSOs for example.

These impresssions do not really fit your discussions. Could you please help me with understanding this matter. You surely see that my description is not really 'technical' but rather 'empirical' or observing.

73 and a Happy New Year to you and all in this group.

Hans, DL4YBP

Hi Hans & All,

This is an interesting subject, I do recall that back in the
Skysweeper days the
maker always used to recommend an external Soundblaster soundcard for the best
results when using it. The following page has some interesting info
about problems
with some soundcard drivers, though it's quite an old article by now:

http://www.soundcardpacket.org/soundcards.htm

It does however give a link to a very useful piece of freeware that
you can use
to make tests with your soundcard, and this is called 'PassMark Soundcheck'
and you can get it from the link below, it's useful for making any comparison
tests between the various cards and benchmarking them:

http://www.passmark.com/products/soundcheck.htm

73 for now, Alan.

That's very interesting and looks promising. Thanks for your ideas Alan.

73 and Happy New Year to you.

Hans, DL4YBP

7036. Re: [navtexdx] Navtex and Soundcards --> Dirk & Roelof

Yahoo group: navtexdx (2013)

From: Dirk Claessens
Topic: 7033 Message: 7036

Hello Hans,

Surely sound card technology has improved over the years.
As you say, short-term clock stability is the important factor. The calibration function of YaND and other decoders only compensates for absolute errors and will assume that the sound card is stable in the long term.

I started coding Yand back in 2007 on a big Dell desktop machine. All went well, Yand worked fine. But then I bought a Dell laptop. I installed Yand on it to do some tests, and suddenly noticed that it wasn't working nearly as well as on the desktop machine. I couldn't even get decent copy of Ostend, booming in at S9+20! Yand kept going in and out of sync, producing gibberish text.

After much head scratching, recalculations, swearing, code changes etc, the penny dropped and the question arose: is my assumption that a sound card has an absolutely correct clock frequency correct? So I made a testfile containing a 400Hz tone on the desktop PC, with a duration of exactly 60 seconds. When played back on the desktop the duration was exactly 60 seconds.

But when playing the file on the laptop, it lasted...58.5 seconds, the soundcard was 2.5% fast! The core of the problem was that the software PLL circuit in Yand that steers the sampling process only corrects the phase of the sample clock relative to the baud clock of the received signal. But this can only be done relatively slow: it should not react to noise. With a sample clock that is way off, the phase errors will add up faster than the PLL can correct it.

I have experimented with a PLL that also corrects for frequency errors (making calibration unnecessary). It worked perfectly...as long as a signal was present. With only noise or with weak signals it ran away, causing other problems.

Regards - Dirk

>
>
>After some time of absence I checked different contrubitions and found your interesting exchange of ideas about soundcards of Dec.18. Well, if I draw the right conclusion the only things that really matters is the stability of the soundcard.
>Please compare my impressions with yours.
>
>1) I still use two old 7-8 notebooks with Realtek High Definition Audio soundchips on the

mainboard. The Navtex decoding quality is meagre. Just the usual European stations can be heard. With a few exceptions when propagation is good.
>
>2) Also bout 6 years ago I tried to improve the decoding by adding an external souncard, a Creative Soundblaster. That really improved reception.
>
>3) About 2 years ago changed to an Intel I7 notebook, also with a Realtek High Definition Audio soundchip on the mainboard. Decoding quality similar to the Creative Soundblaster. This means that the Realtek soundchip has been improved over the years.
>
>4) Later this autumn I had the idea to see how the soundcard of my microham USB Intercae III works for Navtex. Up to then I used it for PSK31 etc. QSOs on the ham bands. I do not know what soundcard is used in this interface. I haven't found any imformation. But decoding was far better than ever before. Very often I could receive fragments of distant stations in between the transmissions of strong European stations. I have the impression as if I changed from very slow AGC to very fast or AGC off like in CW or SSB QSOs for example.
>
>These impresssions do not really fit your discussions. Could you please help me with understanding this matter. You surely see that my description is not really 'technical' but rather 'empirical' or observing.
>
>73 and a Happy New Year to you and all in this group.

7038. Navtex log 31/12/2013 from Tuscany Coast

Yahoo group: navtexdx (2013)
Date: 2013-12-31 09:52:14 UTC
From: Roberto Rizzardi
Topic: 7038 Message: 7038

Strange UNID at 08:11 utc with good signal, too much to be Alger: any help?

Happy New Year to all of you and your family!

Roby

7039. Re: [navtexdx] Navtex log 31/12/2013 from Tuscany Coast

Yahoo group: navtexdx (2013)
Date: 2013-12-31 10:33:21 UTC
From: Dirk Claessens
Topic: 7038 Message: 7039

Hi Roberto,

Off-schedule test from 3W La Garde?
I can't check here, La Garde is on my no-log list.

Happy New Year to you and yours!

Regards - Dirk

7040. Re: [navtexdx] Navtex log 31/12/2013 from Tuscany Coast

Yahoo group: navtexdx (2013)
Date: 2013-12-31 11:31:12 UTC
From: Roelof Bakker
Topic: 7038 Message: 7040

Hello Roberto,

My Afedri / Loop / YaNd combination is set for reception of all signals.
At 08:02 UTC, 08:03 UTC and 08:18 UTC messages from Corsen, FRA, 734 km were received.
Nothing was received in between.

I have been rerunning my PERSEUS recording at 08:11 UTC and found a very weak station visible on the waterfall display. It was way to weak for a proper decode. The recording was made using my mini-whip antenna, so direction does not matter.

It is difficult to tell if this was La Garde. It is 892 km from here and one should expect it to be much stronger. I'm afraid this is not much help. In Internet search for this text did not help either. I gather because it is no official message containing shipping information.

73,
Roelof

7042. Re: [navtexdx] Navtex and Soundcards --> Dirk & Roelof

Yahoo group: navtexdx (2013)
Date: 2013-12-31 11:55:28 UTC
From: <dl4ybp@...>
Topic: 7033 Message: 7042

Hi Dirk,

and thank you for your long explanation. It helps me to understand what is important for decoding Navtex signals. Last night I had my Fujitsu I7 Win7 notebook with Perseus running on 518 kHz. Decoded the signals with YaND and TrueTTY in parallel via 'what u hear' (Stereomix in German), i.e. I used the internal mainboard soundchip. I did the same with one my 7-8 years old notebook and the old external Creative Soundblaster soundcard. The receiver was my Rohde & Schwarz EK071. Guess what gave the better results: The old sysrem. in every case I checked. I should add and stress here that the receivers are different. However, I have done many many comparisons between the two with Navtex in the past and have found hardly differences.

So I will keep your words in mind and thoroughly check the internet sites Alan recommended.

73 and Happy New Year to you.

Hans, DL4YBP

PS
Before I forget: The colours of YaDD are great for my eyes.

Thanks Dirk and Roelof.

La Garde is on my no-log list, so I can't verify if it was from there.
No other messages after this in the same schedule.
I received in the past other messages from La Garde out of schedule but never in this time range.
Algers in not too much far away from here (less then 1000 km), but it is hard to receive for me.
I leave this reception as UNID for now.

73, Roby

Date: 2013-12-31 13:08:17 UTC
From: Vernon
Topic: 7045 Message: 7045

Happy New Year everyone!!!

I will be away today/tonight and most of tomorrow in PEI but have left the rig on 518khz running Navtex decoder and uploading to Frisnit. Just look for VE1VDM on the right side and you can view what I have decoded.

http://www.frisnit.com/cgi-bin/navtex/view.cgi

I have used Marks system off and on over the years and the decoding program is not quite as good as my Seatty but does get most of the TX's

Anyway it's something different to try as I am just about beaconed out as I have been really concentrating on South America over the Xmas break...LOL!!!

Vernon
